
Collection of information on microdistricts for settling and comparisons

Why this bothers us?

In urban cities, landowners sometimes inflate the price of land without providing justification for the inflated price. To calculate the probability of settling in any microdistrict, you need to take into account many variables that are provided separately and without the ability to objectively compare different regions of the city.

Statistics

IN ALMATY : 8 DISTRICTS AND 173
MICRODISTRICTS.

AVERAGE PRICE FOR 1X- 2X- 3X- BEDROOM
APARTMENTS WORTH 23.4, 33, 40 MILL. TENGE

Our goal is to make a visual visualization of the current prices for land in each microdistrict in order to provide space for bidding with landowners.
